SEP 2014 – MAY 2018

UC Berkeley
L&S CS / Statistics: Concentration on Machine Learning

SEP 2011 – MAY 2014

Interlake High school
IB Diploma: Earned IB Diploma one year early (Sophomore – Junior). Spent senior year interning and taking college classes

PROFILE

Random stuff: I like to take long walks on the beach, and by beach I mean my room, and by walk I mean programming. You can also find me loitering at Barnes and Nobles reading GQ and business books. I think school is outdated and we should all just self-learn everything from the internet. I also pirate all my textbooks. I make poor life choices like writing all of this in my profile section.

WORK EXPERIENCE

2 MONS DEC 2014 CURRENT

GradeScope
Web Developer: GradeScope is an online grading platform for tests and assignments. Our goal is to bring all paper grading to the web. In that spirit, I strive to create experiences that are as intuitive as paper grading while at the same time improve the grading process with web technologies. We are in the process of completely redesigning the website to improve usability and aesthetics. See my website for a static mock-ups of my work.

9 MONS APR 2013 DEC 2014

ThinksterLabs
Product Owner / Web Developer: ThinksterLabs is a web development start-up most known for Lonely Giraffes, a social networking website, with 100,00+ users, geared towards the pop-cultured and meme-obsessed millennials. My role as the product owner of Lonely Giraffes is to really, really, really understand the end user. By analysing findings from customer development and user outreach, I formulate and advocate for features, improvements, and strategies that will lead to growth in key metrics.

14 MONS JULY 2013 AUG 2014

Anomo
Project Management Intern: Anomo is a social discovery app for introverts with an emphasis on privacy so that users, especially females, feel safe about meeting new people. I was the project lead on virality and match making, working closely with the CTO and development team to roll out user acquisition campaigns and community building features.

7 MONS JAN 2013 AUG 2013

Haiku
Assistant Manager / Server: Managed the company's yelp and Facebook accounts, designed promotional material, dealt with customer complaints, worked as cashier and server. Best job I ever had. Unlike software startups, working in the service industry puts you face to face with all of your customers. If you ever want to learn how to: deal with people, elicit feedback, develop relationships with customers, and A/B test (yes we ran tons of experiements!), go work at a resturant.

LANGUAGES

FRONTEND
HTML, CSS, Javascript, Jquery

FRAMEWORKS
Ruby on Rails, AngularJs
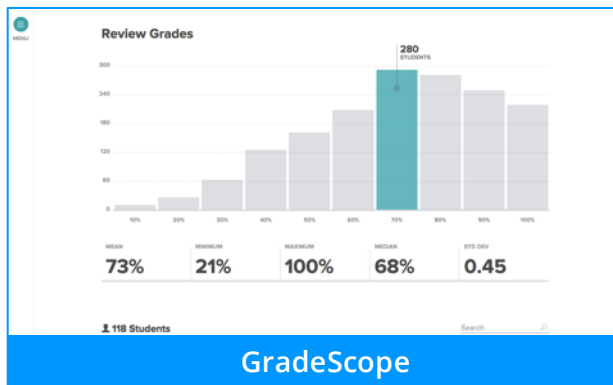

SCRIPTING
Python

HOBBIES

- **Getting shit done**
- **Raising brand awareness**
- **Monetization**
- **Increasing conversion rates**
- **Crossing people up in basketbll then hitting them with a sick jumper**

FAVORITE PROJECTS

GradeScope

Statistics page to quickly show exam metrics

Lonely Giraffes

Events card for showing events on the newsfeed

Anomo

Facebook Icebreaker game that allows users to play with Facebook friends, which ultimately led them to the app

Lonely Giraffes

Prototyping for the "Awkward Wave" our awkward imitation for the Facebook poke :)
